

SLIP-IN Adaptor Door for Grill Dome Cookers

The New Slip-in Door allows for quick installation & removal for clean-out

Draft Inducer Sleeve

Adaptor Door

Step 1.

The Adaptor Door should be bent generally in the shape of the red line to cause it to seal tight in the track. You may shape the door to fit your need.

Step 2.

As you slide the Adaptor Door in, the light gauge stainless steel sheet metal will easily conform to the track.

(When removing the Adaptor Door, it may be necessary to pull out on the inducer sleeve to clear the right side edge of the clean-out opening).

Step 3.

Using the Draft Inducer Sleeve as a handle, slide the Adaptor Door all the way to the left.

Step 4.

The above photo shows the Slip-in Adaptor Door sealed tight and ready to accept The BBQ Guru.

You are now ready to cook.
